

Red T OEM

Replacement A-coils with Drain pans

General Metals
Is now Stocking

Models RTHX 18 / RTHX 24 / RTHX 30
(R-22) 1988 - 1991

Red-T Fan Coils were produced and sold almost exclusively to the apartment industry in the late 1980's and early 1990's. Red T was the first to introduce a ducted "totally encased" combination fan coil and blower that would mount horizontally in a hallway fir-down. Only 36 $\frac{1}{4}$ " long x 20 $\frac{1}{2}$ " width, they were only 11 $\frac{1}{2}$ " tall. The ceiling mount return air filter grill was easily accessible from the hallway.

When DOE mandated a minimum 10 seer rating in 1992, Red T's compact design would not meet the mandate and became obsolete.

With our relationship with the original Red-T engineers, they kept the original A-coil drawings and have begun producing the replacement A coils. These coils include a brand new Drain pan and are an exact replacement match.
